## PROFILE

---

I'm a passionate Full-Stack developer with about 3 years of experience, always bringing enthusiasm to my work. I'm known for taking full ownership of multiple projects, ensuring they're delivered with accountability, and I love collaborating closely with diverse teams to build apps quickly. As a cooperative team player, I have a knack for picking up new skills fast and adapting to whatever challenges come my way.

## WORK EXPERIENCE

---

### Full Stack Developer

*The Cloud Play*

**11/2024 - Present**

Faridabad, Haryana

- In just one month, completed a **Full Stack AI tool** website, complete with **frontend**, **backend**, and user **interface development** for smooth data flow and user experience, guaranteeing a faultless deployment.
- Improved the website, resulting in a **40%** reduction in loading time.
- Developed full-stack online applications for **business gatherings** that allow for easy **event participation** through user registration, **gaming**, and activity monitoring through **QR codes**.
- Created and implemented **interactive user interfaces (UIs)** for business events that let users easily communicate with teams, log in, and explore **activities**.

### Software Engineer

*Opcito Technologies*

**08/2022-10/2024**

Pune, Maharashtra

- Built a **multi-component management system** with user flows and included tracking for every feature. Worked together with the **product**, **backend**, and **design teams** to deliver the app in two months.
- Generated role-based access **RESTful APIs**, enhanced database performance, and switched from MongoDB to **MySQL**, which resulted in a **30%** quicker response time.
- Redesigned the entire login/signup process, which resulted in a **25%** increase in customer signups.
- Developed automated **Lambda functions**, **SQS**, **SNS**, and other tools to optimize workflows while working on a cloud project to enhance **AWS** capabilities with more lucid descriptions.

## SKILLS

---

**Languages:** JavaScript, Python, Java, TypeScript

**Frontend:** HTML, CSS, ReactJs, NextJS, React-Native, BootStrap, TailwindCSS, Php

**Backend:** NodeJs, Flask, Springboot, Php

## EDUCATION

---

### BTech In Electrical Engineering

Haldia Institute Of Technology

**08/2016- 08/2020**

Haldia, West Bengal

## PROJECTS

---

### MailChimp Clone

- A clone of Mailchimp which is an American marketing automation platform and email marketing service, used by businesses to manage their mailing lists and create email marketing campaigns and automation to send to customers.
- For backend development, implemented authentication using Node.js, Express.js and passport-google-oauth2 and CRUD API's.
- **Tech Stack:** HTML, CSS, JavaScript, ReactJs, NodeJs, Express, Mongoose.
- **Features:** Signup/Login, Landing Page, Individual video page, Search feature.
- For more information click on the clone title to visit the website.
